

# We Build Your Business, Digitally.

Custom web & app development powered by Node.js · Flutter ·  
PostgreSQL. From small ideas to complex enterprise systems —  
delivered with real-world expertise.

# Streamlined Business System Development

We rapidly build lightweight business systems powered by a Node.js backend, Flutter app, and PostgreSQL database. Automate repetitive workflows — inventory management, order processing, internal approvals — and manage everything in real time.

## Fast Delivery

Standardized architecture for shorter development cycles

## Mobile Ready

Flutter-based simultaneous iOS & Android support

## Reliable Data

PostgreSQL ensures data integrity and consistency

# Public Data API Integration Apps & Servers

We integrate a wide range of public data APIs — including those from the Ministry of the Interior, Korea Meteorological Administration, and Ministry of Land — to build services powered by real-time information. Data collection, processing, and display are handled end-to-end in a single streamlined solution.

→ **Diverse API Integration**

Unified support for public data portals and open APIs

→ **Real-Time Data Processing**

Instant synchronization between server and app

→ **Custom Dashboards**

Tailored UI optimized for your business needs

# SMS, Messaging & Phone Integration System

Automate business communications including customer notifications, appointment confirmations, and authentication messages. With SMS gateway and VoIP integration, manage send history and inbound responses in one unified view.

## Automated SMS Delivery

Event-driven automatic messaging with full send history tracking

## VoIP Phone Integration

Web-based outbound and inbound calling with recording functionality

## Workflow Automation

Seamless ERP & CRM integration for automated notification workflows

# Weather & Air Quality Information App

We develop a dedicated app that provides atmospheric environment data — including short-term weather forecasts, fine dust (PM10), ultrafine dust (PM2.5), and ozone concentration — displayed in map-based or list formats using Korea Meteorological Administration APIs. Regional notification features and widget support enhance overall user convenience.

## Short-Term Weather Forecast Integration

Real-time weather data display powered by Korea Meteorological Administration API

## Region-Based Push Notification Settings

Register areas of interest and automatically send personalized alerts

## Real-Time Fine Dust & Air Quality Display

Map-based visualization of PM10, PM2.5, and ozone concentration levels

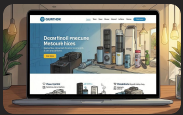

## Home Screen Widget Support

Convenient weather and air quality widgets for improved user accessibility

# Homepage · Product Pages · AI Voice Demo

From brand homepages to product landing pages and AI voice demos — we deliver tailored web solutions that maximize your business's online presence.

## Company Homepage

A responsive homepage that reflects your brand identity. Optimized for SEO and fast load speeds to convert visitors into customers.

## Product Landing Page

A landing page that maximizes your product's value proposition. Visual storytelling and clear CTAs designed to drive higher conversion rates.

## AI Voice · TTS Demo

Integrated with OpenAI TTS, Naver Clova, and more to deliver natural-sounding voice demo pages — ready for product showcases and marketing campaigns.

# Transform Excel Workflows into Web Systems

We convert manual Excel-based processes into automated web systems. Reduce data errors and dramatically improve real-time collaboration and accessibility across your team.

## Current State Analysis

Analyze existing Excel workflows and design the optimal system architecture for your business

## System Development

Build web-based input, inquiry, and reporting features — including role-based access control

## Migration & Training

One-stop support covering data migration from legacy systems and hands-on training for your staff

Request a consultation today — we'll propose a solution tailored precisely to your workflow.
